Base ideas		Captcha problems		What captcha is doing right?		 Restrictions		Potential Solutions		
	Captcha users survey	Color blind people	Annoying to deal with		It stops basic robots	Should still be enough to prevent robot access	Google has a lot of ideas copyrighted (ours must be different but similar)		Multiple captcha options	Open source captcha would make it a lot easier for smaller companies to become secure
	Very easy fix (no big money sacrifice)	Sometimes captcha thinks im a robot	Catpchas should have clearer solutions		Captcha is easy to be distributed to many firms and websites	Prevention against Al learning	They should still be good at stopping intruders		The captcha should be a game(roblox-esc)	Multiple different, but easy, types of captcha questions
	Our main problem is bringing awareness to the problem and to our solution	People with bad eyesight	Takes a lot of time to do a captcha sometimes			Have to compete with google's reCaptcha				
		Needs new branding
